

St. Peter's Preschool Newsletter

December 2025

From the Director's Chair-By Rita Dai Wang

Christmas Singalongs: We are hard at work teaching kids holiday songs to perform for you in our beautiful St. Peter's Chapel. All friends and family members are invited. We hope you will be able to attend!

Mittens, Hats, and Boots: At St. Peter's, we go outside to play just about every day, even in the rain/snow. Please remember to dress your children accordingly. If you have not yet sent in warmer clothing to leave at school, please remember to do so. Special request to send in MITTENS, not GLOVES. 10 fingers per student x 50 students = quite the challenge 😊 Thanks!

Registration: Believe it or not, planning for the 2026-27 school year is underway. Registration information for next year will be coming home before Christmas Break. This information will also be posted on our website by mid-December.

We offer a \$50 referral bonus to families whose recommendations result in a new enrollment. Thank you in advance for spreading the word about our great school!

- 1/5/26 - Registration opens to *PLEDGING MEMBERS OF ST. PETER'S CHURCH*
- 1/12/26 - Registration opens to *CURRENT FAMILIES*
- 1/19/26 - Registration opens to *FORMER FAMILIES*
- 1/26/26 - Registration opens to the *GENERAL PUBLIC*

Self-Regulation for Parents: One of the hardest things to do when our kids have big emotions is to stay calm ourselves. And yet, this is one of the most important aspects to teaching them how to regulate their emotions. I have attached an article below that goes into more detail.

If you are more of a podcast listener than article reader, check out this podcast from *Good Inside with Dr. Becky* – "When Our Nervous Systems Hijack Our Parenting": <https://podcasts.apple.com/us/podcast/good-inside-with-dr-becky/id1561689671?i=1000730530609>

During inclement weather, St. Peter's Preschool will follow Howard County Public Schools' (HCPSS) closing and delay policy.

- If Howard County Schools are closed, St. Peter's will be closed.
- If Howard County Schools have a two-hour delay, St. Peter's will be closed.
- If Howard County Schools have a one-hour delay, St. Peter's will open at 10:30.

If worsening weather causes HCPSS to close during the school day, St. Peter's may also close early, depending on the situation. We will notify parents of any changes via email, Facebook, phone call, or text.

Even if HCPSS is open, there may be times that we arrive at school to find our driveway or parking lot icy and unsafe. In that situation, you may receive a phone call stating that St. Peter's is closed. We will give you as much notice as possible. Also, our driveway can become extremely slippery, so feel free to use Smith Ave (the 'street' next to our driveway on the left) because it is not as steep.

If you would feel more comfortable picking your child up early or not bringing him/her to school at all due to weather concerns, we completely understand. The safety of your children is our highest priority.

Dates to Remember

12/4 2's Parent Conferences (no class for 2's this day)

12/5 3's Parent Conferences (no class for 3's this day)

12/5 Jump Bunch – 4's in school field trip

12/5 Parents' Night Out 5:30-8:00

12/14 Children's Christmas Pageant during St. Peter's Church service 9:45

12/17 Christmas Singalong – 3's/4's, 12:40 (no Extended Day)

12/18 Christmas Singalong – 2's, 12:40

12/24 St. Peter's Church Children's Christmas Service 4:30pm, regular service at 9:30pm

12/25 St. Peter's Church Christmas Service 10:00am

12/22-1/2 Christmas Break

1/5 School resumes

Happy Birthday!

- 12/3** Greer
- 12/6** Haley
- 12/10** Mylah
- 12/13** Ms. Katelin
- 12/17** Beau
- 12/23** Maggie Mae
- 12/27** Ms. Mina

We hope you have a wonderful holiday with your family!

The Art of Self-Regulation for Parents

www.edparenting.com/blog/the-art-of-self-regulation-for-parents

By: [Dr. Layne Raskin](#)

It starts as a normal Tuesday morning. Your child refuses to get dressed, spills juice on their clean clothes, and has a complete meltdown about wearing socks. By 8 AM, you're already feeling frazzled, reactive, and wondering how the day went sideways so quickly.

Sound familiar? The truth is, your child's ability to regulate their emotions is deeply connected to your own emotional state. When parents develop strong self-regulation skills, it creates a ripple effect that benefits the entire family.

Why Parent Self-Regulation Matters

Parent self-regulation isn't just about staying calm during challenging moments; it's about creating the emotional foundation that allows children to develop their own regulation skills. Children's nervous systems are wired to pick up on their caregivers' emotional states, and they use this information to gauge whether the world feels safe or threatening.

When parents are emotionally regulated, children feel safer to explore, express themselves, and even make mistakes. A calm, centered parent communicates to their child's nervous system that everything is manageable, even when emotions are big or situations are challenging. This is particularly important for families dealing with additional stressors or children who need extra [emotional regulation](#) support.

Self-regulation also affects the quality of your parenting decisions. When you're feeling triggered or overwhelmed, it's harder to respond thoughtfully to your child's needs. You might react with anger when they need comfort, or become rigid when they need flexibility. Regulated parents can access their wisdom and empathy more easily.

The modeling effect of parent self-regulation cannot be overstated. Children learn emotional regulation more from watching how their parents handle stress than from any direct instruction. When children see their parents manage disappointment, frustration, or overwhelm with healthy strategies, they internalize these skills for their own use.

Perhaps most importantly, self-regulation helps break cycles of reactivity that can damage parent-child relationships. When parents can pause and respond thoughtfully rather than react impulsively, it creates space for connection and problem-solving rather than conflict and disconnection.

Understanding Your Emotional Triggers

Before you can regulate your emotions effectively, you need to understand what situations, behaviors, or circumstances tend to trigger intense reactions. Parenting triggers are often connected to our own childhood experiences, current stress levels, or unmet needs that make certain situations feel especially challenging.

Common parenting triggers include feeling disrespected when children don't comply immediately, experiencing overwhelm when multiple children need attention simultaneously, or feeling judged when children behave poorly in public. Some parents are triggered by specific behaviors like whining, defiance, or emotional intensity that might remind them of their own childhood experiences.

Physical states also contribute to emotional reactivity. Being hungry, tired, or overstimulated makes it much harder to respond calmly to children's challenging behaviors. Recognizing these vulnerability factors helps you provide yourself with the support you need to stay regulated. Parents dealing with additional stress, like [depression treatment](#) or other mental health concerns, may need extra attention to these physical needs.

It's also important to notice the early warning signs of emotional escalation in yourself. This might include physical sensations like tightness in your chest, changes in your breathing, or mental experiences like racing thoughts or tunnel vision. Catching these signals early allows you to use regulation strategies before you become completely overwhelmed.

Understanding your triggers isn't about eliminating them entirely, but about developing awareness that allows you to respond more intentionally. When you know what situations are challenging for you, you can prepare strategies and supports that help you stay connected to your values and parenting goals.

Practical Self-Regulation Strategies

Developing self-regulation skills takes practice and intentionality, but the strategies themselves can be surprisingly simple and accessible. The key is finding approaches that work for your personality, lifestyle, and the specific challenges you face as a parent.

Breathing techniques provide one of the fastest ways to shift your nervous system from reactive to responsive. Simple practices like box breathing (breathing in for four counts, holding for four, breathing out for four, holding for four) can be done anywhere and help activate your parasympathetic nervous system.

Grounding techniques help bring you back to the present moment when you're feeling overwhelmed or triggered. This might include noticing five things you can see, four things you can hear, three things you can touch, two things you can smell, and one thing you can taste. Physical grounding through feeling your feet on the floor or holding a cool object can also be effective.

Creating brief pauses between trigger and response gives you space to choose your reaction rather than operating on autopilot. This might be as simple as counting to ten, taking three deep breaths, or telling your child, "I need a moment to think about this" before responding to challenging situations.

Physical movement helps process stress hormones and reset your emotional state. This could be gentle stretching, walking around the house, or even doing jumping jacks in the bathroom for thirty seconds. Movement doesn't have to be formal exercise to be effective for regulation.

Positive self-talk can interrupt cycles of self-criticism or catastrophic thinking that escalate emotional reactivity. Replacing thoughts like "I'm a terrible parent" with "this is a hard moment, but I can handle it" helps maintain emotional balance during challenging situations.

The Connection Between Parent and Child Regulation

1. Understanding Co-Regulation as a Two-Way Process

While parents help children regulate their emotions, children's emotional states also affect parents, creating feedback loops that can escalate or calm family dynamics.

2. Recognizing How Your Emotional State Impacts Your Child

Children are constantly reading their parents' emotional cues and adjusting their own behavior based on perceived safety or stress in the relationship.

3. Using Your Regulation to Support Your Child's Overwhelm

When children are dysregulated, your calm presence becomes their external nervous system, helping them find their way back to emotional balance.

4. Building Regulation Skills Together as a Family

Teaching children coping strategies while practicing them yourself creates shared understanding and family culture around emotional wellness.

5. Preventing Emotional Escalation Through Early Intervention

Learning to recognize when either you or your child is becoming overwhelmed allows you to provide support before full meltdowns occur.

6. Repairing Relationships After Difficult Moments

When parent regulation fails and conflicts occur, the repair process teaches children that relationships can heal and that mistakes don't damage love.

Understanding these connections helps parents see self-regulation not as a luxury but as an essential parenting skill that benefits the entire family system.

Managing Overwhelm and Stress

Parenting involves constant demands on your emotional, physical, and mental resources, and learning to manage overwhelm before it leads to reactivity is a crucial self-regulation skill. Overwhelm often builds gradually through the accumulation of small stressors rather than appearing suddenly.

Recognizing the early signs of overwhelm in yourself allows you to intervene before reaching your breaking point. This might include feeling irritable over small things, having difficulty making decisions, feeling physically tense, or noticing that your patience is shorter than usual.

Creating micro-moments of restoration throughout your day helps prevent overwhelm from building to unmanageable levels. This could be taking five deep breaths while your coffee brews, stepping outside for a moment of fresh air, or practicing gratitude while folding laundry.

Building breaks and transitions into your daily routine provides natural opportunities for regulation. Even a two-minute pause between activities can help reset your emotional state and approach the next interaction with more presence and patience.

Lowering unnecessary standards during high-stress periods prevents additional overwhelm from perfectionist expectations. When you're dealing with sick children, work stress, or other challenges, it's okay to simplify meals, relax household standards, or ask for help with non-essential tasks.

Learning to ask for and accept support is a crucial skill for managing parental overwhelm. This might include arranging childcare when you need a break, asking family members for help with specific tasks, or seeking professional support when stress becomes unmanageable. [Support groups](#) can provide a valuable connection with other parents facing similar challenges.

Creating Boundaries for Emotional Health

Healthy boundaries are essential for maintaining the emotional energy and stability needed for effective parenting. This includes boundaries with your children, with other adults, and with your own internal expectations and demands.

Setting boundaries with children doesn't mean being harsh or disconnected, but rather being clear about your own needs and limitations. This might include taking breaks when you're feeling overwhelmed, setting limits on behavior that feels disrespectful, or maintaining adult time and space within the home.

Boundaries with other adults help protect your emotional energy for your family. This could include limiting discussions about parenting choices with critical relatives, reducing social commitments during stressful periods, or saying no to volunteer obligations that stretch you too thin.

Internal boundaries involve being realistic about what you can accomplish and treating yourself with the same compassion you show your children. This means letting go of perfectionist expectations, accepting that some days are just about survival, and recognizing that self-care isn't selfish but necessary.

Professional boundaries might include seeking therapeutic support when you need additional tools for managing stress and triggers, setting limits on work demands that interfere with family time, or addressing your own mental health needs without guilt. [Trauma-informed care](#) approaches recognize that parent wellness is essential for family health.

Creating and maintaining these boundaries requires ongoing attention and adjustment, but they provide the foundation for sustainable, emotionally healthy parenting.

Building Long-Term Regulation Practices

Developing strong self-regulation skills as a parent is an ongoing process rather than a destination. Building sustainable practices that support your emotional wellness over time helps you show up consistently for your children while maintaining your own mental health and life satisfaction.

Establishing daily practices that support your nervous system creates a foundation of resilience that helps you handle parenting stress more effectively. This might include morning meditation, evening journaling, regular exercise, or creative activities that help you process emotions and maintain perspective.

Developing a support network of other parents, friends, or professionals provides essential resources for managing the challenges of parenting. Having people who understand your experiences and can offer practical and emotional support makes the journey feel less isolating.

Regular self-reflection helps you notice patterns in your emotional responses and continue growing in your regulation skills. This might include keeping a simple journal, discussing challenges with a trusted friend, or working with a therapist to understand your triggers and develop more effective strategies.

Learning to view self-regulation as an ongoing practice rather than a perfect achievement helps maintain motivation and self-compassion when you have difficult moments. Every parent loses their cool sometimes, and what matters most is your commitment to repair, learn, and keep growing.

Building family practices around emotional wellness helps everyone develop regulation skills together. This might include family mindfulness time, regular check-ins about emotions, or creating family rules about how to handle conflicts and stress.

The Ripple Effects of Regulated Parenting

When parents prioritize their own emotional regulation, it creates positive effects that extend far beyond managing their own stress. Regulated parents model the importance of mental health and self-care for their children, teaching them that their own emotional wellness matters and giving them permission to prioritize their mental health throughout their lives.
